

ScanConnect Partner API

Get Destination Number — Integration Guide

Purpose

This endpoint lets Knowlarity's IVR / masked-calling system resolve a caller's phone number (**caller_number**) to the correct destination number (**destination_number**) to bridge the call to — the vehicle owner or emergency contact a ScanConnect QR-tag scan most recently requested to be connected with.

Endpoint

Method	POST
URL	https://scanconnect.co.in/api/qr/partner/get-destination-number

Authentication

This is a server-to-server call, authenticated with a shared API key — not a user login token. Send it as a request header on every call:

X-API-Key: ef45e00af0c4af6c534508931abc9d2278325904daaa8ee2

Keep this key confidential — treat it like a password. If it is ever exposed publicly, let us know and we will issue a new one.

Request

Headers

Content-Type: application/json

X-API-Key: ef45e00af0c4af6c534508931abc9d2278325904daaa8ee2

Body (JSON)

```
{
  "caller_number": "+91XXXXXXXXXX"
}
```

caller_number (string, required) — the phone number placing the call. Both plain 10-digit and +91-prefixed formats are accepted; the last 10 digits are matched.

Response

200 OK — match found

```
{
  "caller_number": "9458594043",
  "destination_number": "9392530430"
}
```

404 Not Found — no request on file for this caller_number

```
{
  "error": "No pending call request found for this caller_number"
}
```

401 Unauthorized — missing/invalid API key

```
{
  "error": "Invalid or missing API key"
}
```

Example (cURL)

```
curl -X POST https://scanconnect.co.in/api/qr/partner/get-destination-number \
-H "Content-Type: application/json" \
-H "X-API-Key: ef45e00af0c4af6c534508931abc9d2278325904daaa8ee2" \
-d '{"caller_number": "9458594043"}'
```

Whitelisted Test Numbers

The following caller_number values are pre-seeded on our end and will return a valid destination_number for testing:

Caller Number	Destination Number
9458594043	9392530430
9555511329	9392530430
9711374160	9392530430

Note: for callers outside this test list, a destination_number is only available once that caller has scanned a live ScanConnect QR tag and completed the app's own verify-and-call flow first.
